Substances we clean up:

Battery wastes

Coal tar

Creosote

Gasoline

Lead

Metals

PAHs

PCBs

Pesticides

Petroleum

VOCs

With the emergence of voluntary cleanup and liability assurance programs, environmental managers are approaching environmental investigations and cleanups in new ways. They recognize that realistic evaluation and management of potential risks allow contaminated sites to be brought back into productive use. Voluntary cleanup and indemnification programs provide powerful new ways to manage your organization's potential liabilities.

To take advantage of these new programs, you need a consultant who understands the emerging diversity of regulatory approaches, who tackles site assessment and remediation creatively, and who helps you achieve your overall business objectives. You need solutions that protect your interests while they protect the environment. You need Gentek.

Gentek has been helping clients address contaminated sites for more than 10 years. Our experience enables us to solve your contaminated site problems quickly, economically, and reliably. We'll work with you to develop a project road map, guide you over the rough spots, and help you avoid surprises. We'll show you how you find the hidden value in your contaminated sites and how to keep from getting tied up in long-term, expensive remediation. Managing contaminated sites doesn't have to be stressful. With our experience at hundreds of sites, we have a good idea what to expect and can help you plan ahead. We'll work with you to develop a business like approach to managing your contaminated sites.

Gentek's full spectrum of services means we can offer complete solutions, whether you need something as straightforward as a site assessment or as complex as remediation in conjunction with the construction of a new industrial facility. We'll help you find common-sense solutions for contamination problems so that you can get back to business.

We're no strangers to your type of site

Gentek has performed assessment and remediation work at sites ranging from airports to zinc mines, so we've almost certainly dealt with the particular issues you are facing. We've worked at manufacturing, mining, and refining sites; at the sites of former manufactured gas plants, wood treating operations, and steel mills; and at sites contaminated with lead, PCBs, pesticides, chemicals, and petroleum, including sites with underground storage tanks.

Added value through alliances

During the last decade, Gentek has formed alliances with environmental consulting firms in other Countries. These partnerships allow us to offer additional benefits to our clients, such as a local office, increased staff availability, regulatory negotiation advantages, and complementary expertise.
